Skills

Programming Languages: JavaScript, TypeScript, SQL, PHP, C#

Technologies: Node.js, NestJS, Express, Git, MySQL, Redis, Docker, Jenkins, GraphQL, AWS, Laravel, CakePHP, Prisma, Microservices

Languages: Native Spanish, B1 English

Experience

Backend Developer, Macropay – Mérida, Mexico

Oct 2023 – Present

- **Altán MVNO (Chip Macropay):** Optimized system performance by implementing a caching layer with **Amazon ElastiCache (Redis)**. Designed a data validation workflow that prioritizes **Redis** lookups before making external requests to **Altán**, significantly reducing latency and provider API overhead.
- **Providers Jobs:** Developed provider-specific **NestJS** jobs and middlewares via **Docker** on **AWS** to automate device **lock/unlock/enroll/unroll** operations across 3 vendors. Engineered API communication layers and automated **SQL Server** data updates to ensure real-time status synchronization and system scalability.
- **Belvo:** Integrated the **Belvo API** as a data aggregator to automate information retrieval from official government entities. Developed data extraction and processing workflows for institutional records, essential for risk assessment and profile validation during the financing process."
- **Financing Cancellation:** Refactored an API and a specialized **Cronjob** for automated financing cancellations due to user abandonment. Implemented **Prisma ORM** to streamline the data access layer, enhancing type safety and database management efficiency.
- **Travel Portal | Macropay:** Developed the integration between the **Macropay portal** and **SAP** by consuming **OData** services. I designed an adaptation layer to synchronize critical business processes, enabling real-time data interoperability and aligning portal operations with the company's ERP ecosystem.

FullStack Developer, Grupo Colorines – Mérida, Mexico

Jul 2022 – Oct 2023

- **CRM Development and Evolution:** Executed visual and functional updates to existing CRM (**CakePHP**) modules, optimizing the interface to enhance navigation and user experience (UX), Refactored **CRM** components by removing legacy functions and integrating new tools to streamline internal operational processes.
- **Database Logic Development:** Designed and implemented **Stored Procedures** and **Views** in **MySQL** to centralize complex query logic, ensuring data integrity and optimizing CRM response times.
- **Landing Page Optimization:** Executed continuous improvements and updates on multiple **Angular-based** landing pages for land development sales. Implemented new component-driven sections, optimized loading performance, and refined UI/UX designs to maximize lead generation and user engagement.

Software Developer, OneSmart Solutions – Mérida, Mexico

Aug 2021 – Jul 2022

- **Payment Gateways:** Implemented credit card processing solutions by integrating the **Rapipago API** and establishing terminal connections with **Getnet** for client-facing systems.
- **Ovalo24:** Engineered a custom software solution featuring **real-time** bidirectional synchronization via **APIs**, ensuring seamless data flow between the local system and the company's web portal.
- **Hybrid Connectivity (Web/Desktop):** Developed cross-platform connections between web and desktop applications using **JavaScript** and **PHP**, while managing the **Velneo** development environment for desktop solutions.

Backend Developer, Compufax – Mérida, Mexico

Jan 2021 – Aug 2021

- **API Development and Core Connectivity:** Designed and implemented scalable **APIs** using **Node.js** and **Laravel** to manage critical company connections and ensure system interoperability.

- **CMS and Framework Management (PrestaShop & Laravel):** Built and maintained web applications using the **PHP Laravel** framework and **MySQL**, implementing complex business logic and ensuring high-quality, maintainable code.

Education

Technological Institute of Mérida – Bachelor in Computer Systems Engineering

Jan 2021
